

## Weekly management, Wk 16 (130415-190415)

This sheet represents data from one of our best performing customers. The manager of this farm has used AMG catheters for over 10 years in three different countries. Their PSY "today" is 35. Please look at their conception rates, farrowing rates, live-born numbers, and most importantly their "weaned piglets per litter"! Now ask yourself this, how much are you possibly losing by not trying something new? Our customers would not stay with the technology for 10 years if it did not make them money...

Amazingly enough, this was done with once per day heat detection and once per day breeding! That is not something we recommend if you have enough staff to heat check and breed twice per day, but how can you argue with results like this?

The timing used to achieve this is towards the bottom. If you have any questions, please email [mark@abrods.com](mailto:mark@abrods.com) or talk to your local distributor...

### Weekly management, Wk 16 (130415-190415)

	Target	Last Week	4 wk.	Check+/-	8 wk.	16 wk.	Check+/-	26 wk.
